“Powered by B30”

John Deere’s approval of B30 in ALL Tier 4 equipment turned into a demonstration project across 4 farms this season.

The success of that demonstration led to the development of new “Fuel Handling Guidelines” that have been posted to the Clean Fuels website:

https://cleanfuels.org/biodiesel-handling-guidelines/

The next step is to link interested users to local fuel suppliers in each state.

Clean Fuels is soliciting a primary contact within each state soybean association that users can select from a drop-down box that will send an automated email to the primary contact to help track and combine interested users with local terminals and fuel suppliers.
